Tel: +91 20 2435 9060

Mr. Imran Qureshi 29 Y / Male · ID LCM-10239 Date: 18/10/2026

BP 128/80 · Pulse 88/min

C/o Fall from bike, right wrist pain and swelling 2 hours

O/E Tenderness distal forearm, no neurovascular deficit. X-ray: minimally displaced distal forearm fracture.

Diagnosis Closed fracture distal right forearm — below-elbow cast applied. Allergy: ibuprofen (angioedema).

Rx

1. **Tab. Ultracet (tramadol 37.5 + paracetamol 325)**
   1 tab — Three times daily after food — 5 days
2. **Tab. Pan 40**
   1 tab — Before breakfast — 5 days
3. **Tab. Shelcal 500**
   1 tab — Once daily — 6 weeks

Advice

- Keep the arm elevated, move fingers often
- Do not wet the cast
- Return immediately for numbness, blue fingers or severe pain

Review After 1 week with check X-ray in cast
