TREADMILL TEST (BRUCE PROTOCOL)

Patient Name	**: Mr. Gurpreet Singh Bains**	Accession No.	: OH-TMT-26-1007
Age / Sex	: 53 Y / Male	Modality	: Exercise ECG
Patient ID	: LCM-10241	Study Date	: 07/10/2026
Referred By	: Dr. Ananya Rao	Reported	: 07/10/2026 01:30 PM

INDICATION

Exertional chest tightness; risk factors — smoking, dyslipidaemia, family history.

PROTOCOL

Bruce protocol. Resting HR 82/min, BP 140/90. Exercised for 6 min 10 s (stage II, 7.4 METs), reaching 158/min (95 % of target).

FINDINGS

Exercise limited by chest tightness at 5 min 40 s. 2.0 mm horizontal ST depression in II, III, aVF and V4-V6 at peak exercise, persisting 4 minutes into recovery. BP response normal. No arrhythmia.

IMPRESSION

1. **TMT strongly positive for inducible myocardial ischaemia at moderate workload.**
2. **Coronary angiography recommended.**

Kindly correlate clinically. Not valid for medico-legal purposes.
