USG BOTH BREASTS

Patient Name	**: Mrs. Meenakshi Iyer**	Accession No.	: MI-US-26-09281
Age / Sex	: 46 Y / Female	Modality	: Ultrasound (high-frequency linear)
Patient ID	: LCM-10237	Study Date	: 28/09/2026
Referred By	: Dr. Ananya Rao	Reported	: 28/09/2026 01:30 PM

CLINICAL DETAILS

Palpable lump, left breast. Mother: breast cancer at 62.

LEFT BREAST

At 2 o'clock, 4 cm from the nipple: a well-circumscribed oval hypoechoic lesion measuring 21 x 13 mm, parallel to the skin, with circumscribed margins and posterior acoustic enhancement. No internal vascularity on Doppler. No calcification.

RIGHT BREAST

Normal fibroglandular parenchyma. No focal lesion.

AXILLAE

Bilateral axillary nodes with preserved fatty hilum (largest 8 mm), likely reactive.

IMPRESSION

1. Left breast 2 o'clock: oval circumscribed hypoechoic lesion, 21 x 13 mm — likely fibroadenoma. BI-RADS 3 (probably benign).

2. Short-interval follow-up ultrasound in 6 months, or tissue sampling if clinically indicated given family history.

Kindly correlate clinically. Not valid for medico-legal purposes.
